World Conference on Early Childhood Care and Education

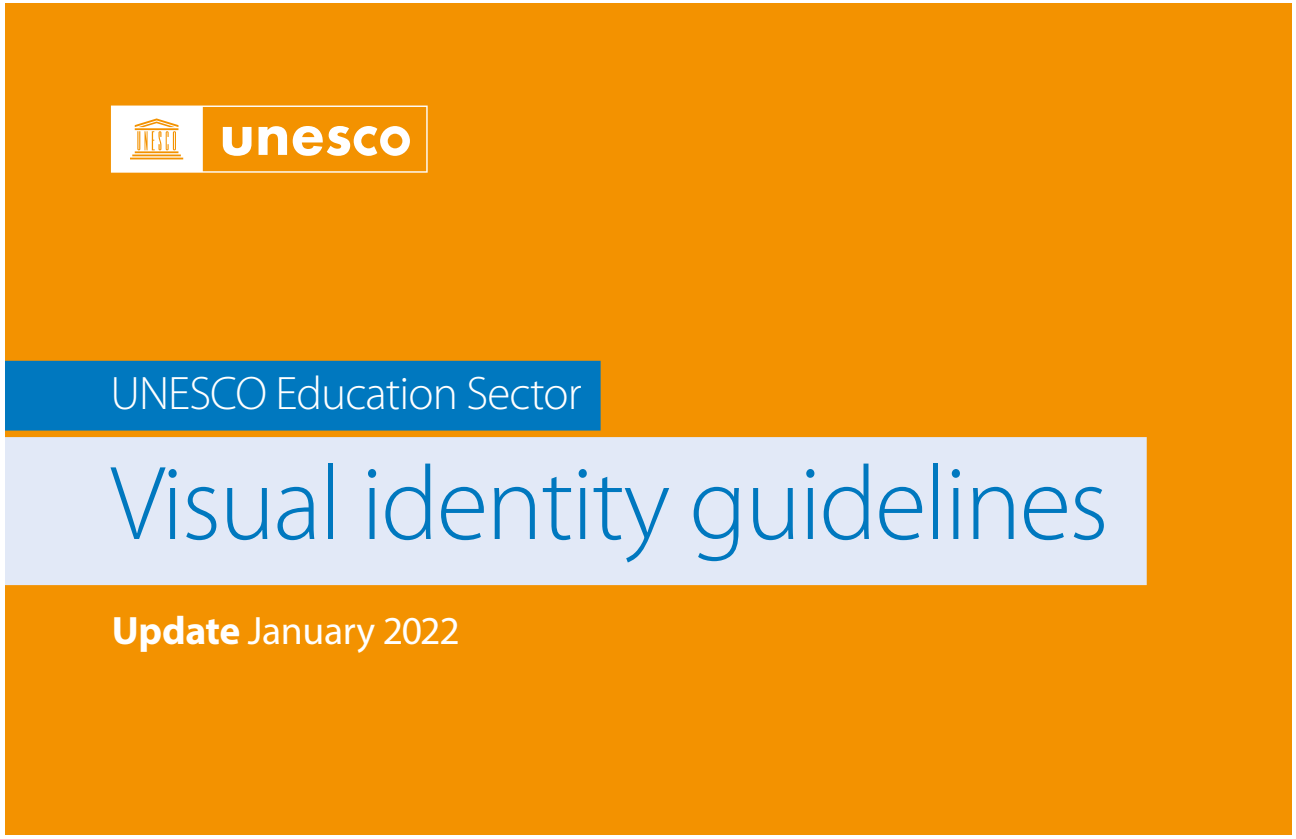

Visual identity guidelines

1. Education branding

The visual identity of the World Conference on Early Childhood Education is a subset of the *UNESCO Education Sector visual identity guidelines*. Therefore, the colour palette, font and general layout should respect the visual identity defined by these guidelines.

You can download the UNESCO Education Sector visual identity guidelines on the ED intranet: on.unesco.org/3QJO1oK

2. Typography

Myriad Pro is the UNESCO Education Sector typeface to be used in all typography.

This highly readable and adaptable sans serif OpenType font comes in a variety of weights and glyphs and has support for a wide range of languages.

4. Key visual portrait & landscape

There are 4 key visuals that can be used as masters for creating new designs.

The background colour and title rules can change to any colour within the used colour palette. Please see pages: 8 & 9

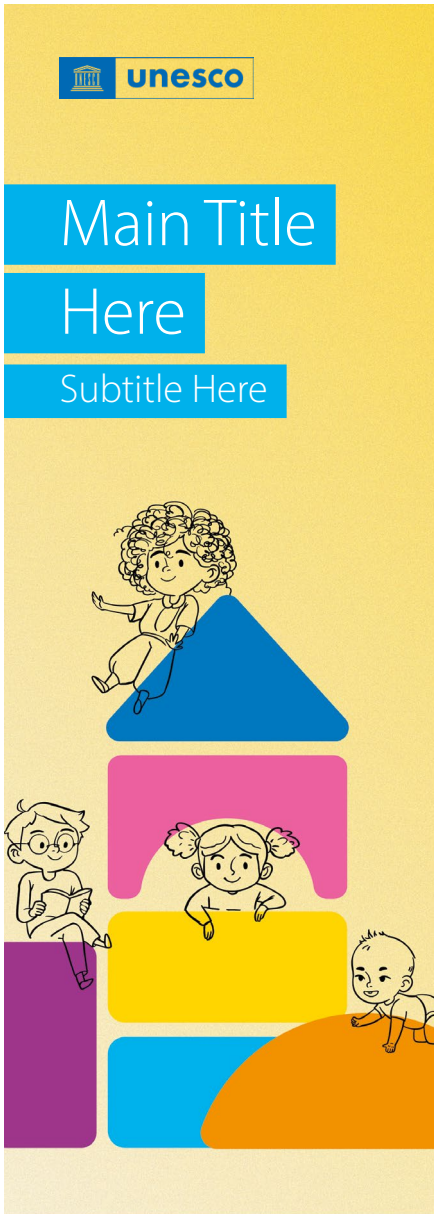

4. Key visual extreme portrait & extreme landscape

There are 4 key visuals that can be used as masters for creating new designs.

The background colour and title rules can change to any colour within the used colour palette. Please see pages: 8 & 9

5. Key visual components

The illustrations of the key visual are made up of the following three components

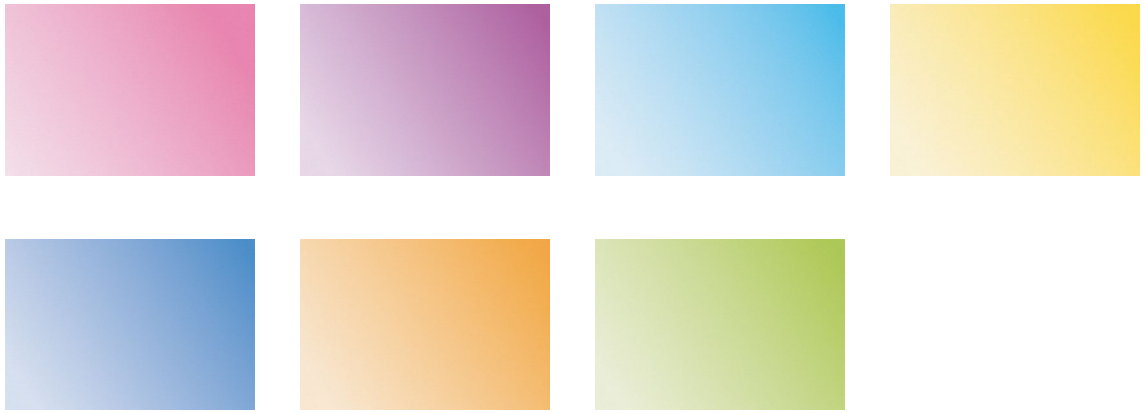

1. Background
1 of 7 background colours can be used, which is to be applied as a soft gradient (instructions available on page 8)

2. Building blocks
There are 6 different building block shapes. Where possible use the block structures from the key visual.

3. Illustrations of children
There are 4 child illustrations, utilising all of the characters in a key visual or a first tier communication ensures representation and diversity in scenarios unsupported by photography.

Where possible, create designs using the assets as they are presented in the key visuals, rather than creating new compositions from scratch, as this avoids issues around scale and placement.

1. Background

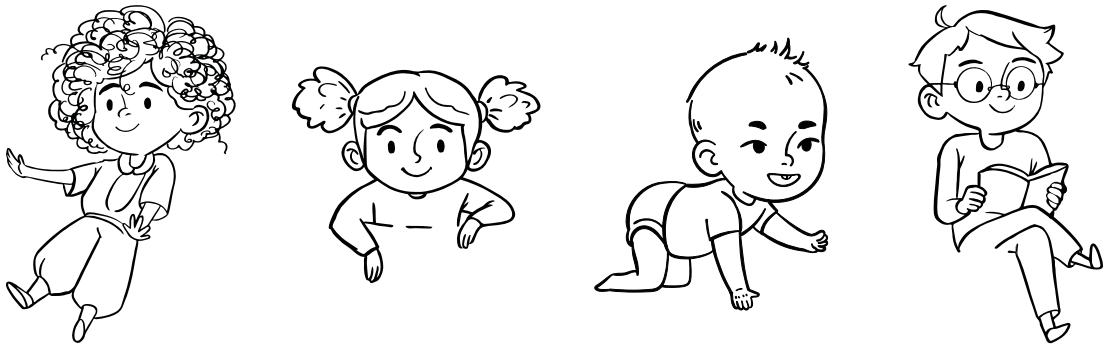

Please see page 8 for instructions on how to create background gradients.

2. Building blocks

Where it is necessary to resize the blocks, scale them together to avoid issues around proportion.

3. Illustrations of children

Where it is necessary to resize the illustrations of the children, scale them together to avoid issues around proportion and line thickness.

5. Key visual components – background colours

The background can appear in a gradiated version of any of the colours from the colour palette (see page 4).

How to:
Wherever possible take the background colour required from the relevant key visual.
If the creation of a new background is required, follow the instructions below:

1. The gradient is linear, starting from the top right of the visual with the most intense, saturated colour, running to the bottom left where it is at its lightest.
2. Creating the gradient, set the intense colour at 80% tint of the chosen colour, and the lightest end of the spectrum is to be set at 20% of the same original colour.
3. In photoshop add 'uniform noise' at 10 to add texture to the background gradient.

Blue

Orange

Green

5. Key visual components – title bars

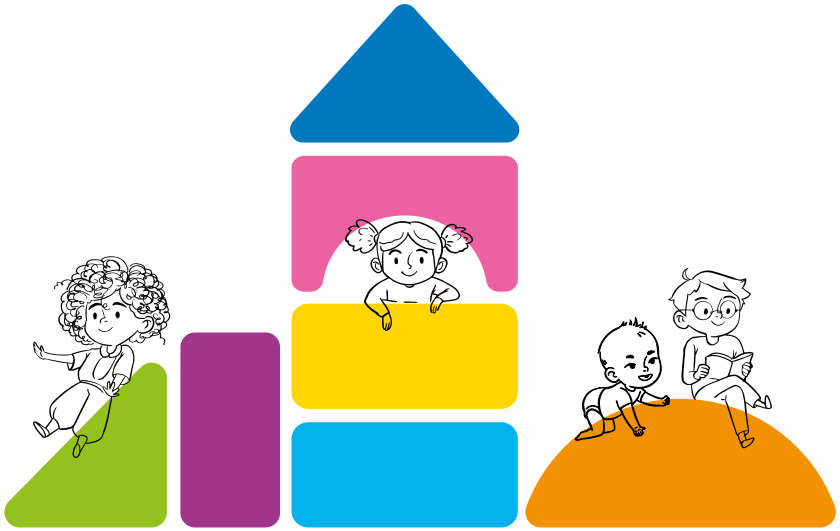

The title bars, both main and sub titles, should be presented in the same colour as each other.

With 7 x background colour variants AND 7 x Title bar variants a total of **98 colour combinations** are possible. For great variety and differentiation.

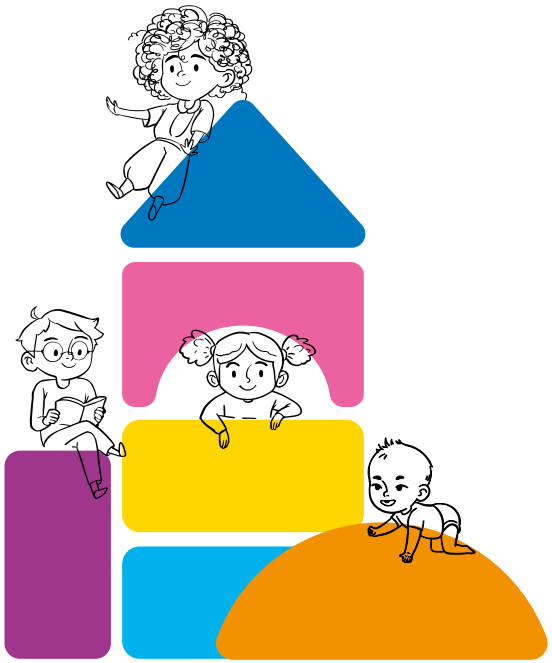

5. Key visual components – illustrations

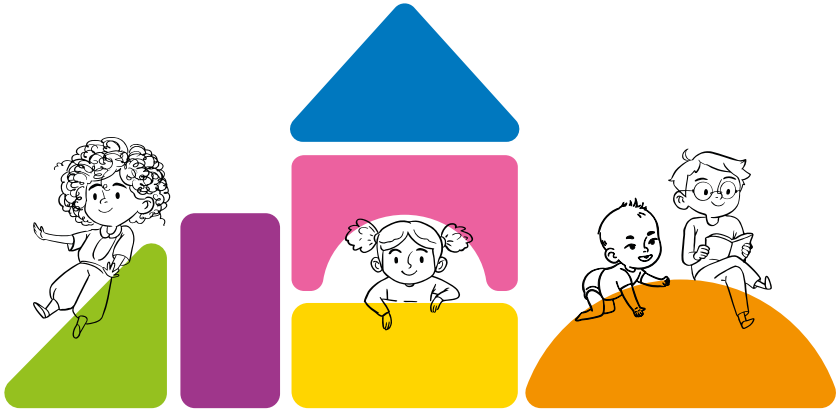

Where possible, create designs using the assets as they are presented in the key visuals, rather than creating new compositions from scratch, as this avoids issues around scale and placement.

Master illustrative lock-up for general use

Illustrative lock-up for extreme portrait proportions (where width is limited)

Illustrative lock-up for extreme landscape proportions (where height is limited)

6. Examples & templates – publication covers

In situations which require photography, allow the characters and shapes to 'gently' interact with the image where possible to allow for greater cohesion and harmony of assets.

Photography and graphic cover example

6. Examples & templates – web banner

6. Examples & templates – social media

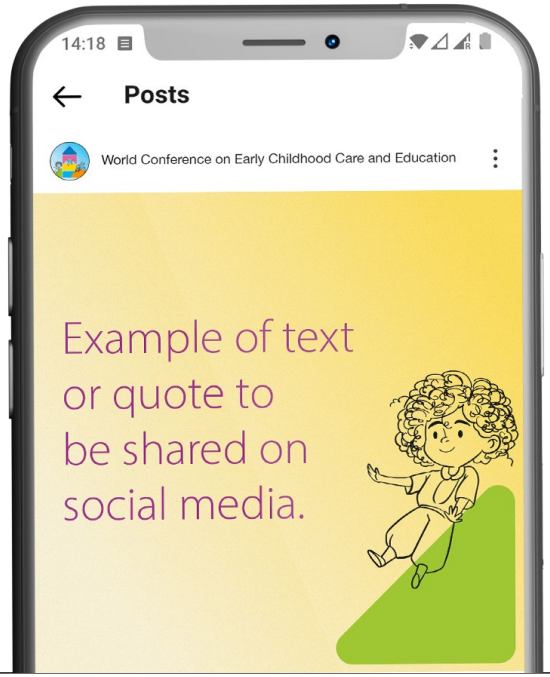

The graphics and characters can be brought to life across social media where the bold colours and playful themes can add vibrancy and personality. The use of different imagery and typefaces can be explored for social media communications.

In situations which require photography, allow the characters and shapes to 'gently' interact with the image where possible to allow for greater cohesion and harmony of the assets.
